

Team Overview:

- Team Name: EAE Inc.
- Logo:

- Project title: Merrimack College Research Community Page
- As a team, we hope to create a web-based Research Community Page exclusively for Merrimack faculty. Our main priority is to allow users to seamlessly interact with resources provided in the platform, as well as interact with other faculty members to share information and other media. In addition, we will establish strong, secure administrative tools allowing for a safe and efficient platform for access and communication.

Team Members:

- **Erin McNulty (Project Manager, Frontend Developer)**
 - **Why These Roles:** Throughout my programming experience, I have worked in many different teams and I have developed strong organizational skills ensuring that all tasks are completed by a set deadline. I also have the ability to keep the team on track as we create our product through my leadership skills. These skills will help the team be able to provide our client with a high quality product in a timely fashion. On top of that, I have experience working in programming languages and frameworks such as html, css, and javascript that will help us develop our product on the frontend side. These skills will support the team in building a user-friendly web application designed in a well thought out way.
 - **Areas of Growth:** By doing this project, I want to strengthen my skills in being able to work in a sprint style environment and planning for a larger, longer-term project. I also hope to learn how to combine elements from different classes such as Databases and Object Oriented Design to learn how to combine them into one product for a client.
- **Emma Leute (UX Designer, Database Manager)**
 - **Why These Roles:** Throughout my computer science coursework at Merrimack, I have completed multiple courses involving development of different types of UI. I enjoy this type of coding, specifically the aspect of creating something visual and

interactive. I have also completed coursework involving databases and data organization, which I feel qualifies me for a role as database manager. I enjoy working with large amounts of data, and hope to use this passion as well as my experience using SQL to seamlessly integrate the database aspect into our project design.

- **Areas of Growth:** Upon completion of this project, I hope to have learned more about web development from a backend coding perspective. I have not and will not be taking a web development course during my undergraduate work, so I am hoping to gain some experience through this project. Additionally, I hope to gain professional experience meeting with and discussing expectations with a client, who relies on us to create a product to suit their needs. This is a scenario that I have not found myself in quite yet, but might encounter in the workforce. Finally I hope to further strengthen my ability to collaborate with peers. Due to the length and complexity of this capstone project, it will be essential to combine our strengths as a group to create a functional end product.
- **Ayden Lang (Backend Developer, QA/Testing Coordinator)**
 - **Why These Roles:** In my time programming, I've done an extensive amount of work around the backend of code, especially when it comes to server communications, and we believe that my skills would be best applied doing so for this project. Additionally, I have experience working with web development and we believe that I can effectively test and trace back the cause of issues to their source, effectively work on fixes, and give helpful feedback to others where needed.
 - **Areas of Growth:** I want to, over the course of this project, work further on developing my time management skills and planning abilities, as well as to learn more about how databases work within the context of professional applications so that I may bring those skills with me into the workforce.

Working Agreements:

- Our team is planning to communicate using Microsoft Teams as it provides a safe and secure environment for sharing information. We understand that everyone is working on a different schedule and that some days might be busier than others, however we are expecting that each team member will respond to a message within 24 hours of it being sent. This will allow us to give each person enough time to respond and also prevent us from falling behind on our tasks. In addition, we are planning on meeting as a group every Wednesday night at 7 in the library, on top of class time, and scheduling any additional meetings as needed throughout the course of the project.
- In terms of decision making, as a team we have decided to vote on all topics and come to a consensus on what we want to do. This will allow for all voices and opinions to be heard, creating a stronger team and working environment.
